Nama : Deanissa Sherly Sabilla

Kelas : SIB 3C

Mata Kuliah : Pemograman Mobile

Pertemuan : Flutter 02

```
FLUTTER 02
1.
                                  Praktikum 1: Membangun Layout di Flutter
                                                   main.dart > ધ MyApp > ♡ build import 'package:flutter/material.dart';
                                                 class MyApp extends StatelessWidget {
  const MyApp({super.key});
                                                      // Bagian title section (judul + loka
widget titleSection = Container(
padding: const EdgeInsets.all(32),
child: Row(
children: [
Expanded(
                                                                     // soal 1 > kolom rata kiri
child: Column(
crossAxisAlignment: CrossAxisAlignment.start,
children: [
// soal 2
                                                                            // sool 2 * juduk dengun padacng caman

Container(

padding: const EdgeInsets.only(bottom: 8),

child: const Text(

'Wisata Gunung di Ratu',

style: TextStyle(

| fontweight: FontWeight.bold,

), // Text

), // Text

), // Container
                                                  main.dart > ધ MyApp > ♡ build import 'package:flutter/material.dart';
                                                 class MyApp extends StatelessWidget {
  const MyApp({super.key});
                                                      // Bagian title section (judul + loke
widget titleSection = Container(
padding: const EdgeInsets.all(32),
child: Row(
children: [
Expanded(
                                                                         xypanded(

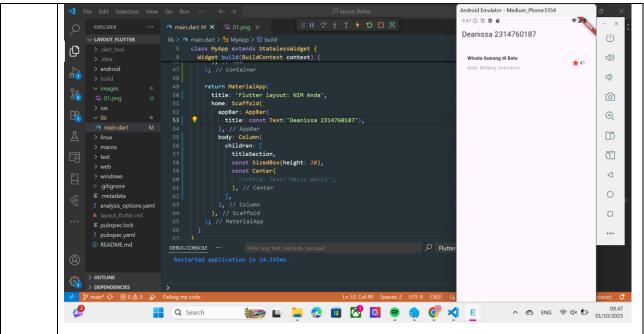

// soal 1 → kolom rata kiri

child: Column(

crossAxisAlignment: CrossAxisAlignment.start,

children:

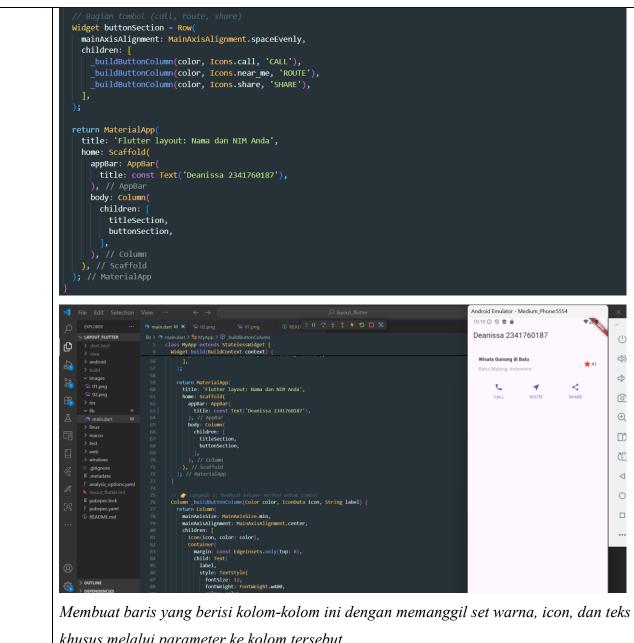

// soal 2 → judul dengan padding bawah
                                                                                // soal 2 → judul dengan padding bawah
Container(
  padding: const EdgeInsets.only(bottom: 8),
  child: const Text(
    Wisata Gunung di Batu',
  style: Textstyle(
    fontweight: FontWeight.bold,
    ), // TextStyle
    ), // Text
), // Container
```

Mengisi nama dan nim di text field, dan membuat layout diagram.

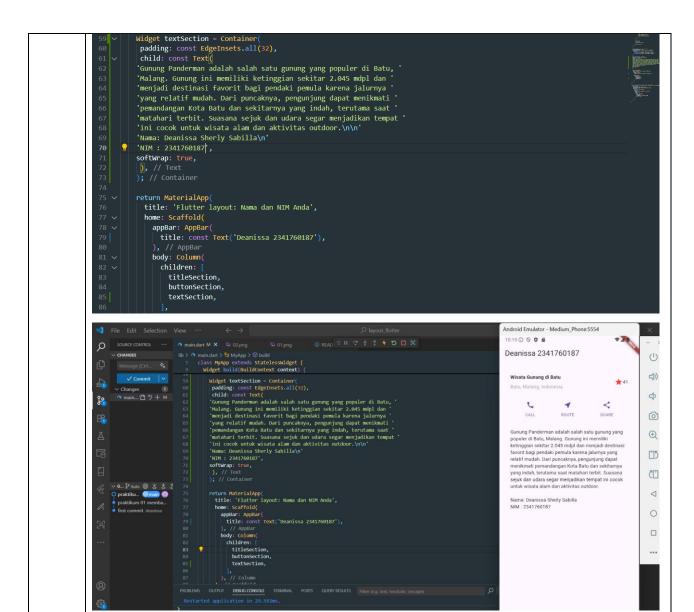

Diagram berisikan bagian Judul, memiliki 3 anak: kolom teks, ikon bintang, dan angka.

2. Praktikum 2: Implementasi button row

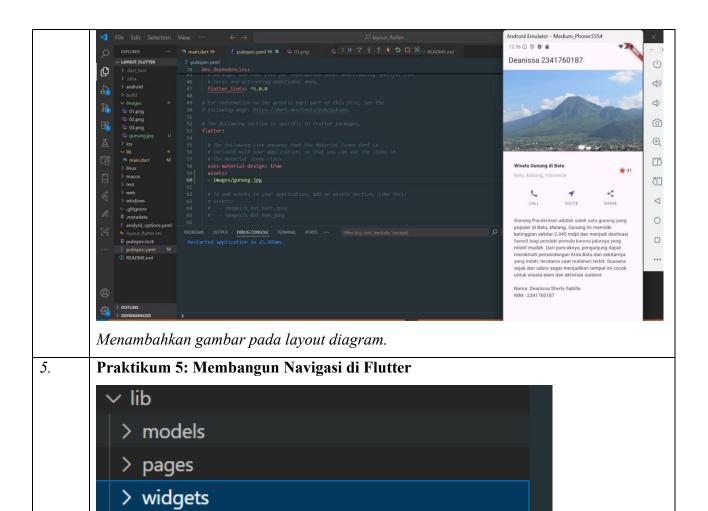

khusus melalui parameter ke kolom tersebut.

3. Praktikum 3: Implementasi text section

Memasukkan teks ke dalam Container dan tambahkan padding di sepanjang setiap tepinya.

4. Praktikum 4: Implementasi image section

main.dart

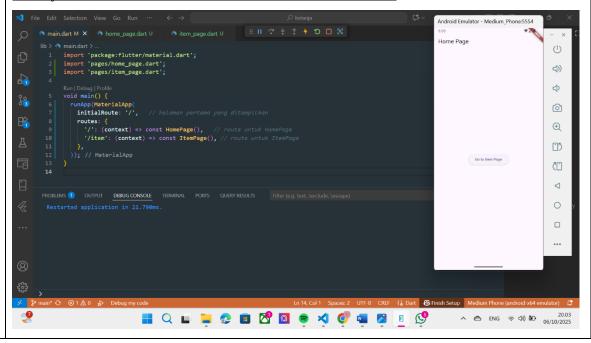

Membuat folder pages, widgets, dan models

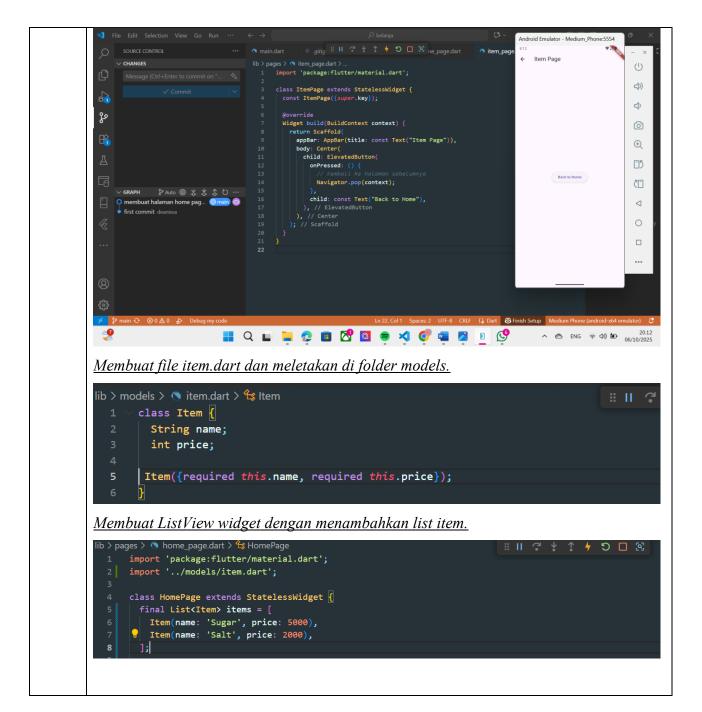

Membuat file home page.dart & item page.dart

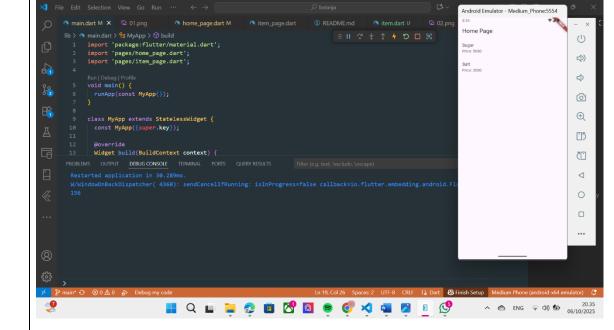

```
lib > pages > 🐧 home_page.dart > ...
       import 'package:flutter/material.dart';
      class HomePage extends StatelessWidget {
        const HomePage({super.key});
        @override
        Widget build(BuildContext context) {
          return Scaffold(
             appBar: AppBar(title: const Text("Home Page")),
            body: Center(
              child: ElevatedButton(
                onPressed: () {
                  Navigator.pushNamed(context, '/item');
                child: const Text("Go to Item Page"),
lib > pages > 🐧 item_page.dart > ...
      import 'package:flutter/material.dart';
      class ItemPage extends StatelessWidget {
       const ItemPage({super.key});
        @override
        Widget build(BuildContext context) {
          return Scaffold(
            appBar: AppBar(title: const Text("Item Page")),
            body: Center(
              child: ElevatedButton(
                onPressed: () {
                  Navigator.pop(context);
                child: const Text("Back to Home"),
```

```
lib > 🐧 main.dart > ધ MyApp
      import 'package:flutter/material.dart';
      import 'pages/home_page.dart';
      import 'pages/item_page.dart';
      void main() {
       runApp(const MyApp());
      class MyApp extends StatelessWidget {
       const MyApp({super.key});
 12
       @override
        Widget build(BuildContext context) {
         return MaterialApp(
            title: 'Flutter Routing Demo',
            theme: ThemeData(primarySwatch: ☐ Colors.blue),
            initialRoute: '/',
            routes: {
              '/': (context) => const HomePage(),
              '/item': (context) => const ItemPage(),
```

mendefinisikan route untuk kedua halaman home dan item.

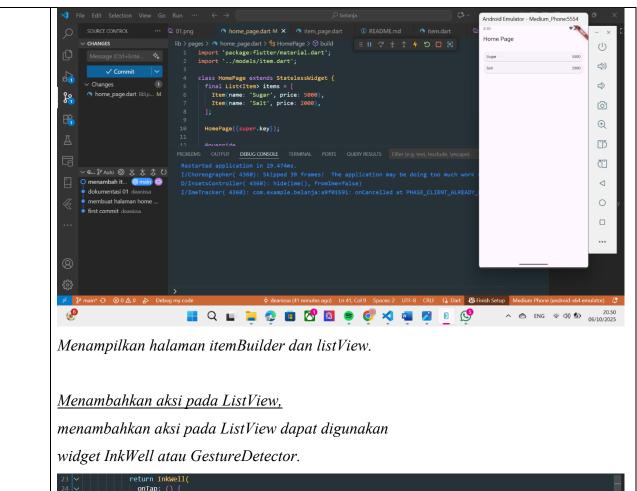

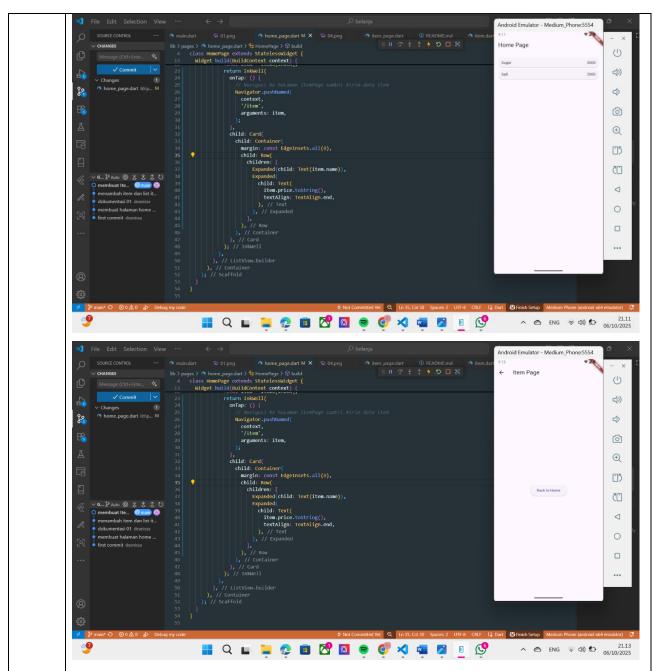

Pada halaman home page, menampilkan item.

Membuat ListView pada praktikum, digunakan itemBuilder.

Pada halaman home page, jika salah satu Item di klik, maka akan beralih ke halaman Item.
